GRAF – Un engagement toujours plus fort en faveur de l'économie circulaire

The GRAF company is among the world leaders of the rainwater and wastewater management markets. GRAF is aware of the need to reduce its resources consumption and therefore decided to reduce its production processes' environmental impact. GRAF uses 3 kinds of industrial processes (rotomolding, polymer injection and welding) allows GRAF to chose the most energy efficient process right at the production design phase. Sodimac – La table d'épandage passe tous les produits à tous les dosages

Depuis sa première présentation au Sima 2019, la dernière génération de table d'épandage Sodimac a connu de grandes évolutions techniques, afin qu'elle soit en mesure d'appliquer tous les produits sur une large plage de dosage et en grande largeur. Son poids plus important que celui d'un cadre à hérissons verticaux a conduit Sodimac à reculer l'essieu des modèles Rafal, afin d'assurer un report de charge de 4 tonnes sur l'attelage. Cette spécificité se traduit esthétiquement sur les Rafal 3400 et 3600 par l'adoption de garde-boues en acier, à la place des variantes en plastique rotomoulé.

Sodimac – La table d'épandage passe tous les produits à tous les dosages

Since its first presentation at the Sima tradeshow back in 2019, the Sodimac spreading table has undergone major technical developments, so that the latest generation is able to apply all products over a wide dosage range and in great width. Its greater weight led Sodimac to move the axle back on the Rafal models, in order to ensure a load transfer of 4 tonnes on the coupling. This specificity is aesthetically reflected on the Rafal 3400 and 3600 by the adoption of steel mudguards, instead of the rotomolded plastic variants. (Translated from French)

The 1-year milestone for our UK Sales Engineer

CP Cases has a long-standing tradition of making high quality ruggedised transportable cases; with trading starting back in 1971. Our products range from off the shelf items right through to completely customised cases which are used to transport a vast range of items. The experience learnt from the varied products we have designed gives us a huge wealth of knowledge for us to help find the correct case solutions for you. Covering a large range of complex products from rucksacks for portability within the communication industry, to Rotomoulded plastic cases for missiles within the Defence and Aerospace sectors. That knowledge is an important part of working for CP Cases, which is why it is always a pleasure when we can celebrate an employee's milestone with the company. Our UK Sales Engineer Stuart Watson has now been working with us for a year (how time flies).

Rotomolding Market News - North America

2021 Bennington 22SVSR

Value is the mission of the Bennington SV line, with boats that start at \$17,110. New for 2021 is this 22-foot-11-inch 22SVSR. Nicely equipped for well under \$40,000, this triple-tube boat is assembled with many of the same premium materials and features found across the Bennington line, including cool-touch Simtex vinyl upholstery, quarter-inch-thick cross members, and through-bolted deck fasteners. Roto-molded plastic seat bases are drained and vented to fight mildew, and they feature channels that allow water to easily drain off of the deck.

2021 Harris Sunliner 230 Sport

A new addition to the Harris Sunliner family for 2021, the 230 Sport maintains an affordable price point while bringing in a higher level of trim and increasingly powerful horsepower options. The exterior features a redesigned fence profile, highlighted by a sleek taper aft and, on our test boat, optional black rails. Step aboard and you'll also find an upgraded interior, with pillow-top furniture covered in new soft-touch vinyl and lumbar recesses backed with diamond-pattern stitching accents. Harris adds a pair of cup holders, along with dual USB ports to top off electronics, placed within each cutaway. Below, roto-molded seat bases include guttered stowage for gear. Harris covered these roto-free seat bases in vinyl for a more upscale feel.

2021 SunChaser Eclipse 25 SSB | Boating Magazine

The new Eclipse 25 is the top-of-the-line model in the SunChaser series for 2021, a pontoon stretching more than 27 feet in length and loaded with features. The Eclipse name for this series is apt because blacked-out rails and deck trim—all the rage on pontoons right now—are standard. Our boat also had optional black-painted tubes and a black ski-tow rig to complete the “eclipse” effect. There’s a bench seat with an aft-facing angled seatback to port and a pair of wraparound loungers in the bow. All seat bases are color-matched, roto-molded plastic, and the deck is covered in durable woven vinyl.

2021 Harris Cruiser 250

Cruiser models may be the entry point into the Harris Boats lineup, but don't expect lesser construction from this builder just to reach the price point. Cruiser series pontoons feature all-new furniture for 2021, with bases fabricated from color-matched, roto-molded composite, and seat cushions covered in soft-touch vinyl.
