Transporting vaccines in a -80°C environment : OLIVO's the french speciali: for this kind of mission

The vaccine against COVID 19 developed by Pfizer requires to be maintained at extremely cold temperatures while it is transported : this challenge has been taken by OLIVO, the only french company that received the necessary Cémafroid certification. Cémafroid is the industrial authority for the cold chain market. This certification allows OLIVO to occupy a sweet spot in the world market, the company's products being sold in more than 40 countrys. "We took up the

mecanic constraints challenge that comes from the 100 °C wide temperature differences observed between the container's exterior and interior environments", explains Pascal Seneclauze, Olivo's CEO. (Translated from French)

What do bulk containers and e-commerce have in common?

More than you might think, actually. In fact, e-commerce is a hot new application for mobile bulk containers, ergonomically handling items and small boxes that need special attention. It's the next obvious step after laundry carts. You'll see. As we all know, there's always opportunity to improve on a good initial idea. And, that's exactly what Meese Inc. did many years ago as it expanded from canvas into plastic rotomolded laundry carts. Just as you already suspect, these bulk containers have many other uses. One in particular might surprise you.

Spain : Rototank plans to triple its business volume in two years and is looking for land to grow in Biar

The Alicante-based company, which manufactures waste containers continues on its path to growth. Rototank, which also happens to be the heir of the old toy company Jesmar, will close the 2020 financial year with a business volume of more than 5 million euros (4.6 million in 2019), and its business plan includes reaching 12 million euros in two years, so that it will practically triple its income compared to the last year. (Translated from Spanish)

Rotomolding Market News - North America

Frul Inc. Releases New Tesla Cooler

Frul Inc. has released their first custom-built Tesla cooler, the Frul R3. The Raleigh, North Carolina-based company designed the R3 to make use of the frunk, a clever storage space under the hood of the Tesla Model 3. The cooler is manufactured at Redline Plastics, a Wisconsin-based plastics manufacturer. Joining brands such as Yeti and RTIC, Frul elected to produce the R3 through rotomolding, a manufacturing process widely considered to be best suited for coolers due in part to superior ice retention and durability.
