Germany : a new 3D sand printer is used for the first time in European foundry

Novel hybrid process chains expand classic mould making to include the advantages of 3D printing. The Blöcher foundry is the first company from Europe to use a new 3D sand printing system. However, the new machine will not only be used in the Blöcher foundry for the rapid production of moulds for the production of spare parts and small series made of aluminium. The robot-assisted system is also used when urgent replacements are needed for defective, worn or lost tools for deep drawing, foaming, rotational moulding, thermoforming or blow moulding.

Bangladesh : BSTI brings 43 new items under licensing

Bangladesh Standards and Testing Institution (BSTI) has brought some 43 new products under mandatory licencing to ensure availability of quality products in the market. The firms will have to put BSTI standard mark in the labels, packages or containers of the products. The BSTI, an organisation under the ministry of industries, issued a gazette notification, dated January 31, 2021, with the names of the products. Rotationally moulded polyethylene water storage tanks are included among the products.

AgBoss helps farmers choose Australian Made

Helping to keep Aussie farmers strong is of vital importance for the Australian Made Campaign. It's essential the agriculture industry is supplied with the best equipment and resources – designed and built for Australian conditions – and marketed with their instantly recognisable Australian Made, Australian Grown logo. That's where AgBoss comes in. Initially, the company started with a humble product line: plastic measuring jugs. However, numerous innovative products have been developed since to meet the industry's complex needs that keep changing every year. They now manufacture predominantly using the processes of injection-molding and blow-molding to create a range of products that are sold into the Agricultural, Abattoir, Commercial Kitchen and Government Infrastructure Industries. As of mid-last year, they purchased another business with steel fabrication and rotational molding capabilities.

Spain : Familycash owners buy Plastikien

Canet Ferrero Inversiones, the owner of the Valencian supermarket chain Familycash, has acquired Plastikien, a manufacturer of plastic products for DIY activities and gardening. The Albiñana family, which founded Plastikien, maintains ownership of Vondom, the designer outdoor furniture brand that for years has operated as an independent company from the company with which they started in plastics molding business. This company was created back in 2007 when Plastikien opted to use plastic rotational molding in the manufacture of design pots and planters. (Translated from Spanish)

Germany : a specialist in plastics processing celebrates its 50th year of blow molding

A decision made 50 years ago was the starting point for specializing in plastics processing methods for Roth Industries, a company based in Dautphetal-Buchenau. Although heating oil tank production boomed until the end of the 1990s, Roth started manufacturing water and

clarification tanks using the blow molding process as early as 1994. The experience gained in tank production was used here. Later, the rotation process was added as a production method for containers with a capacity of up to 6000 liters. (Translated from German)
