Material selection for rotational molding process utilizing distinguished multi criteria decision making techniques

Rotational Molding is defined as an emerging plastic processing technique wherein a privilege of stress free plastic products is achievable. Linear Low Density Polyethylene (LLDPE) has always been on highest priority as base resin for roto moulded product. However, LLDPE lacks in the criteria where strength is a priority in few applications. Additives can build gap to enhance the mechanical properties. A proper selection of additive to deliver an appropriate needed mechanical property in roto moulded product has always been challenging.

Say "Hi" to the Happier Camper Traveler Lightweight Trailer

05/03/2021

The coolest bits of the Happier Camper Traveler are the queen-size bed front and full-size bed rear areas of its interior space, which are reconfigurable thanks to Happier Camper's "Adaptiv" technology. Easy-to-move modular rotomolded plastic cubes can be stacked and reconfigured to create beds, bunk beds, benches, work stations, lounge spaces, tables, and storage.

Argentina: a municipal council plans to install ecological ashtrays in its streets to fight cigarette butts littering

La Plata Mayor Julio Garro recently met with representatives of the Camuzzi company in order to launch the installation of eco-ashtrays on public roads to limit the proliferation of cigarette butts in the streets. The eco-ashtrays that have been chosen are made by rotational molding from recycled polyethylene (from pipes). They are therefore strong and light. The use of this process has allowed an ashtray design that is easy to set up and whose design prevents the loss of cigarette butts due to the wind. (Translated from Spanish)
