Conférence ROTOMOULD

La dernière conférence Rotomould a eu lieu il y a trois ans, alors que personne n'aurait pu envisager les changements à venir, ni comment la filière du rotomoulage a relevé les défis qui se sont présentés devant elle depuis 2019. L'ARMA et son Conseil d'Administration sont heureux d'annoncer la tenue d'une nouvelle conférence en septembre 2022. Les échanges avec les différents acteurs de la filière ont en effet mis en lumière un important besoin de se retrouver. (Article en Anglais)

Premier Tech invests in its French site

28/06/2022

The Canadian group Premier Tech is investing 2.5 million euros to reinforce the production of tanks for individual sanitation at its Senan site, in France, which it acquired two years ago. According to the site manager, the company would like to reach 1,500 pieces per year for the traditional polyester resin pipe and 700 for the flat polyethylene pipe. (Translated from French)

You don't mess with the mouse. Here is DFWTM, the new chair by Ron Arad for Qeeboo

04/07/2022

Do you remember the Big Easy, the steel chair that Ron Arad torch-welded (that's right!) in 1988? Since 1991, Moroso has been offering another version, made this time with rotomoulded polyethylene. It was a bit of the calling card of the cult Israeli-British designer. At the time, the armchair was nicknamed 'Mickey' because of its two oversized armrests which resembled the ears of the famous Disney mouse. Big Easy is in a way the mother of DFWTM (acronym of Don't F***k With The Mouse), which has just released the Qeeboo armchair. This one is available in a version for interiors, with fabric-covered polyurethane foam, and another, for outdoor spaces, made from rotomolded recyclable polyethylene. (Translated from Italian)

Keep cold drinks afloat with this premium cooler

04/07/2022

If you've been a fan of high-end rotomolded super coolers in the past, but don't like having to carry their heavy weight and pay that high price tag, this Cobalt cooler is the answer to your prayers. Cobalt coolers have an impressive five-day ice retention time, while being 20% lighter than their rotomolded competition. (Translated from French)

Argentina : Camuzzi donated 50 eco-ashtrays to the Monte Hermoso municipality to be installed in public spaces

23/06/2022

The Eco-ashtrays were born as an initiative of the company to give a second chance to the leftover polyethylene pipes that are generated when household connections or repairs are made on public roads, and that after a process of melting and processing can be converted into a new product, such as these ecological ashtrays. These ashtrays are easy to install and allow you to collect butts without them flying or scattering away. They are produced by rotational molding. (Translated from Spanish)
