Simop launches mass production of Trithon for stormwater

Developed by the Normandy-based company Simop, the hydrodynamic solution for treating run-off water, called Trithon, has obtained European ETV (Environmental Technology Verification) certification. Rotomoulded in partly recycled polyethylene, this imposing device with a diameter of 1.60 m has undergone numerous tests, validated by the CSTB, in order to ensure its effectiveness according to the level of precipitation (light or torrential rain) or the type of pollutants (plastic debris, sand loaded with hydrocarbons or heavy metals). Chilean student develops rotational moulding machine for recycled materials

Sofía Valdivia, a young student of manufacturing engineering and industrial design at the Universidad Técnica Federico Santa María (USM) in Chile, has developed an innovative rotational moulding machine that improves the processing of recycled plastics. The innovation is currently being evaluated by the National Institute of Industrial Property (INAPI) with a view to obtaining a patent. According to the student, the idea came from "the complexity of working with recycled plastic, and all the trial and error involved". (News in Spanish)
